Curriculum attività scientifica

La mia attività ha avuto come filone principale lo studio delle interazioni fondamentali in collisioni adroniche di alta energia. Mi sono concentrato sulla ricerca di nuove particelle attraverso l'identificazione di eventi contenenti quark pesanti e sulle problematiche legate alla tracciatura di particelle cariche attraverso l'utilizzazione di rivelatori a semiconduttore. Questo ha rappresentato il filo conduttore di buona parte della mia esperienza professionale nel campo dello sviluppo e costruzione di rivelatori, sia all'interno dell'esperimento Collider Detector at Fermilab (CDF) che ha raccolto dati presso il collisionatore Tevatron che ha operato dal 1985 al 2011, che (dal 2013) nell'esperimento ATLAS. Qui, dopo essermi occupato di problematiche relative al disegno del nuovo tracker per il futuro run ad alta luminosità (HL-LHC), lavoro all'upgrade del calorimetro adronico. Ho fatto parte del gruppo che ha lavorato alla scoperta del quark top (1994-1995), e alle misure relative negli anni a seguire. Mi sono poi dedicato alla caccia al bosone di Higgs, come anche a varie misure di precisione del modello standard delle particelle elementari.

Sono stato relatore di varie tesi (di laurea e dottorato) negli esperimenti ai quali ho preso parte.

Research Activity and Scientific Publications

I am interested in aspects of theoretical particle physics that are testable at current and future experiments. For this reason, my research activity of the past decade has been focused on extension of the Standard Model (SM), with the aim of identifying patterns of new physics in:

- 1 the origin of the weak and Higgs mass scales;
- 2 the structure of quark and lepton flavor;
- 3 the nature of particle Dark Matter (DM);
- 4 the resolution of the strong-CP problem with the QCD axion;
- 5 the dynamics of cosmological phase transitions and inflation.

The outcome of my research is listed below in the publication list.
