## RÉSUMÉ

---

Fabio Mantovani graduated in Physics at the University of Ferrara in 2002 and since then he began working on geoneutrinos, a topic of great interest in the present days which exhibits strong interconnections among physical and geological disciplines. During his graduate studies in Earth Sciences at the University of Siena he carried out research activities in this scientific area: the main outcomes of these studies have been collected in a doctoral thesis dedicated to the investigation of the potential of geoneutrinos as a probe for exploring our planet, able to give insights about the radioactive content of the Earth and its radiogenic contribution to the terrestrial heat. Concurrently, he gained a strong expertise in management as he founded in 2006 and coordinated for the following two years of post-doc the *Laboratory of Applied Geophysics* at the Center for GeoTechnology, which is nowadays one of the most active and well equipped Italian laboratories for geophysical investigations.

After having started in 2008 his activity as a research fellow at the Department of Physics of the University of Ferrara, Fabio Mantovani published global models for the prediction of the geoneutrino signal expected at the KamLAND, Borexino, SNO+ and JUNO experiments, which immediately became a reference at international level. Firmly convinced of the exceptional potentialities arising from the interplay and collaboration of geochemists, geophysicists and particle physicists aimed at a broader understanding of the evolutionary thermodynamics and geochemistry of the Earth, he published several scientific papers with authors belonging to remarkably diverse scientific communities and he strongly supported initiatives like the *Neutrino Geoscience Conference* (ed. 2005, 2007, 2008, 2010, 2013 e 2015), the session entitled *Geoneutrino: The Nexus of Particle Physics and Earth Science* at the Goldschmidt conference (2013) and the *Summer Institute ISAPP: Using Particle Physics to Understand and Image the Earth* (ed. 2016 and 2018).

With the objective of transferring the technological know-how gathered in fundamental Physics to the environmental radioactivity monitoring, Fabio Mantovani founded and coordinates since 2010 the *Laboratory for Nuclear Technologies Applied to the Environment* at the Department of Physics and Earth Sciences of the University of Ferrara. In this framework, a high-level expertise in the design and manufacturing of advanced equipments for laboratory, in-situ and airborne gamma-ray spectroscopy measurements has been achieved, which allowed for participating to competitive tenders and winning grants. These financial supports allowed for starting, maintaining and consolidating a team of young researchers which provided an essential contribution in the realization of the thematic maps of natural radioactivity for three Italian regions (Tuscany, Veneto and Umbria). In this scientific scenario, the team had the chance to take part to the international scientific debate on the radiological characterization of NORMs (Naturally Occurring Radioactive Materials) and on the new techniques dedicated to in-situ and airborne gamma-ray spectroscopy. These activities provided also the opportunity of establishing collaborations with private companies, which led Fabio Mantovani to be one of the inventors of the patent GammaStream, a device designed and realized in the framework of a technological transfer of the University of Ferrara which at the end has become a successful commercial product.

Fabio Mantovani has always carried out an intensive didactic activity at the University of Siena (lectures in Mathematics, Physics and Applied Geophysics) and at the University of Ferrara (lectures in Physics II, Elements of Astrophysics, and Nuclear and Subnuclear Astrophysics). He was advisor/co-advisor of several Bachelor Theses, Master Theses and PhD Theses. Since 2016, he coordinates the annual Summer School in Nuclear Physics and Technologies

which originates from a collaboration between the University of Ferrara and the University of Texas at Austin, where he was invited as visiting professor in March 2018. As an INFN (National Institute for Nuclear Physics) associate researcher, he is the coordinator of the Ferrara section of the JUNO experiment since 2015 and member of Scientific National Committee II since 2017. From February 2017 to February 2018 he was member of Academic Senate of the University of Ferrara as representative of the researcher fellows. From February 2018 Fabio Mantovani is an associate professor of University of Ferrara.
